

STOLLER'S CLEARSTART 15KZ+N AND CLEARSTART 22KZ

CLEAR LIQUID. CLEAR BENEFITS.

Stoller
Unleashing The Power Of Plants

Healthy early growth is essential to maximise the yield potential of a crop. Stoller's ClearStart products are easy-to-use liquid fertilisers designed to optimise available nutrients for early crop establishment and vigorous development – even in dry conditions.

Stoller's ClearStart products are clear liquids that are formulated with Stoller's unique technology. All of the nutrients in Stoller's ClearStart products are in solution, unlike some cloudy liquid products that still contain some suspended solids. Stoller's ClearStart products are manufactured using a complex of phosphorus, potassium, zinc, nitrogen, molybdenum and cobalt. The acidic formulation means it can be applied directly to billet and it helps create the acidic environment needed around roots to help plants access labile and non-labile forms of phosphorus.

Stoller's ClearStart products contain high levels of phosphorus – a critical nutrient for establishing a healthy root system. Highly available phosphorus will encourage and stimulate root cell division and development. Nutrients in ClearStart products are efficiently utilised by roots, root hairs and mycorrhizal fungi. This means increased uptake of phosphorus along with all other nutrients, leading to outstanding fertiliser efficiency.

**Stoller's
ClearStart
promotes fast,
healthy, early
growth and
vigorous plant
development.**

HOW DOES STOLLER'S CLEARSTART COMPARE TO COMPETITORS PRODUCTS?

FEATURES	STOLLER'S CLEARSTART 22KZ	STOLLER'S CLEARSTART 15KZ+N	PHOSPHORUS LIQUID SUSPENSION	MAP GRANULAR FERTILISER
Contains N and P	✓	✓	✓	✓
Unique Stoller acid technology	✓	✓	✗	✗
Nutrients available from day one	✓	✓	✗	✗
Resists becoming locked up in soil	✓	✓	✗	✗
Helps release nutrients locked up in soil	✓	✓	✗	✗
Quicker establishment and early growth	✓	✓	✗	✗
Contains K to promote carbohydrates and protein	✓	✓	✓	✗
Contains Zn for root growth	✓	✓	✓	✗
Contains Mo (helps N conversion) and Co (helps nodulation and stress relief)	✓	✓	✗	✗
High fertiliser efficiency – 50% less product needed to provide required nutrient levels	✓	✓	✗	✗
Efficient handling and application – less refills needed	✓	✓	✗	✗

ClearStart 15KZ+N and Bio-Forge were applied at planting to this crop in Ingham North Queensland. Fifteen days after planting you can see new root growth coming through (top left), and this effect is even more prominent 21 days later (top right). Two months later and the crop is clearly off to a good start (bottom) – despite planting in mid-July (peak of winter) on a rainfall dependant dryland farm.

BENEFITS OF STOLLER'S CLEARSTART

- Highly available phosphorus and potassium – also contains nitrogen, zinc, cobalt and molybdenum
- Promotes fast, healthy, early growth and vigorous plant development
- Clear liquid formulation means all nutrients are in solution
- No settling out in tank
- Unlimited shelf-life
- Minimal agitation needed
- No blocked nozzles
- Can be applied directly to seed/billet
- Can be used for foliar application

Stoller's ClearStart products are available in two formulations. Stoller's ClearStart 22KZ and Stoller's ClearStart 15KZ+N which contains a slow release form of nitrogen.

CLEARSTART 15KZ+N

ANALYSIS	w/v
NITROGEN	8%
PHOSPHORUS	15.4%
POTASSIUM	5%
CALCIUM	1.8%
ZINC	0.7%
COBALT	0.05%
MOLYBDENUM	0.05%

CLEARSTART 22KZ

ANALYSIS	w/v
NITROGEN	1.8%
PHOSPHORUS	22.0%
POTASSIUM	7.5%
ZINC	1.0%
COBALT	0.07%
MOLYBDENUM	0.07%
