WARNING: Excessive use of molybdenum (Mo) can be harmful to stock. Plant levels of Mo can be high for 4 weeks after application. It is advisable to keep stock off treated areas for this period. Mo application may induce copper deficiency in grazing animals. This is most likely to occur on sandy soils low in copper. Check rate and frequency of Mo use with appropriate authorities.

CAUTION: Always conduct a 'Jar Test' using all products in recommended proportions in water to establish physical compatibility.
